

Ramadan and Exams, 2017: information for schools and colleges

This paper is relevant to all school and college leaders, and those involved in administering GCSE, GCE AS and A levels. There are also safeguarding implications for students considering how to observe Ramadan, therefore this will affect all teaching staff, and all staff engaged in the delivery of exams over the summer.

ASCL has worked with imams, Islamic scholars, experts, Muslim chaplains in the education sector and leaders to produce this information for school and college leaders so they may initiate discussions with Muslim students on how best they can fulfill their Islamic obligations during Ramadan, including the obligation to perform well in their exams.

The intention of this paper is to provide information and practical advice for schools and colleges; ASCL does not endorse any particular interpretation of Islamic law or practice.

Section 8 Appendices

1 Overview

In 2017, Ramadan and exams fall within the same period. Ramadan is predicted to start around 27 May and will end around 26 June, external exams will start in early May and continue until the end of June. The situation where Ramadan coincides with exams is likely to continue until 2019/2020.

In 2017, Ramadan will also coincide with midsummer; the combination of long days, higher temperatures as well as examinations will put extra pressure on young Muslims, however they decide to observe Ramadan.

There is a wide and diverse range of possible interpretations of Islamic law. Scholars differ in their opinions on what age Muslims become obliged to fast, how long they should fast for and the legitimate exemptions. In this paper we have tried to present various positions from which parents, carers, and young people can draw their practice, rather than one Islamic answer.

Observing Ramadan may bring many benefits to individuals and communities, but also has the potential to cause the individual temporary hardship through hunger and lack of liquids during fasting hours which may impact on physical wellbeing and cognitive performance.

Young Muslims and families, particularly those sitting exams this summer, will need to balance their obligations as Muslims with their studies and the importance of examinations for their future, noting that the pursuit of education is also a religious and moral duty for Muslims of both genders. This is also alongside any other relevant factors when deciding how to observe Ramadan this year.

No child under the age of puberty is obliged or expected to fast. Younger children may do a partial fast but this should be in consultation with and under the supervision of parents, carers and schools.

There was agreement from the imams, Islamic scholars, experts, chaplains and leaders we consulted that it is essential schools and colleges help support dialogue with Muslim students and families. Muslim students, their families and schools and colleges should be aware that there is a wide and diverse range of opinions on how to observe Ramadan and from what age.

We recommend using this information paper as a positive opportunity for engagement with students to make decisions for themselves.

Age at which fasting is obligated or recommended

Fasting is only obligatory under Islamic tradition when a child becomes an adult. However, jurists differ over when this is.¹ It is recommended for children to practise shorter and partial fasts in order to train them for the full fasting when they become adults.

Parents and carers should be made aware of the following points of view to facilitate their decision-making:

- The 'biological maturity' view: children become adults when they reach physical or biological maturity, that is, puberty. According to this view, children are expected to fast at the age of 15, possibly earlier.
- The 'intellectual maturity' view: children become adults upon attaining intellectual maturity in addition to biological maturity. According to this view, the expectation to fast will occur at some point between the ages of 16-19. Fasting, including partial fasting, is only recommended before this.

Unless there are legitimate safeguarding concerns, schools and colleges should not dictate to children who are considered old enough, or their families, how they observe Ramadan as this is a personal decision. Children and families should be informed of the flexibility Islamic Law offers to delay or exempt themselves from fasting and late night prayers if they believe their performance in exams could be affected.

Islam encourages critical reasoning and while individuals may seek advice from religious leaders, they have the right to make their own decision. It is intended that the information in this paper will be used as a positive opportunity for engagement with students to make these important decisions for themselves.

2 Ramadan and exams, 2017

Ramadan is the ninth month in the Islamic calendar. It is a 29-30 day period of prayer, fasting, self-control, charity-giving and goodwill to others. Ramadan is a time of self-reflection, increased religious devotion and self-control over the need to eat and drink during daylight hours. Fasting during Ramadan (which includes drinking no water), is one of the Five Pillars (fundamental religious duties) of Islam. Those fasting are recommended to

¹ Wahbah al-Zuhayli, *Al-Fiqh al-Islami wa Adillatuhu* [Islamic Jurisprudence and Its Evidential Bases]

have one meal (*suhur*) just before sunrise and an evening meal (*iftar*) after sunset during Ramadan. Muslims are encouraged to think of cleansing the whole self, through prayer and reflection throughout the day which can have a positive impact on individuals, familial and wider social relations

Ramadan is observed by Muslims across the world. Observing Ramadan has the potential to offer individuals many benefits as well as the potential to cause temporary physical hardship during the day. Each person will be affected in different ways, to different degrees and at different times in their lives. Some of the possible benefits include:

- feeling closer to God
- learning to exercise greater self-control
- establishing a healthier lifestyle and better habits
- greater feelings of peace, tranquility and self-satisfaction spiritually
- the opportunity to establish better relationships with self and others

Ramadan also offers an opportunity to strengthen family and community ties through congregational prayer and celebration. Alongside these possible benefits, observing the fast and late-night prayers may also create less desirable consequences for some people, such as tiredness, low energy, dehydration, reduced focus, memory or concentration. This is of particular concern in the next few years when Ramadan falls in the summer in the UK, and for Muslim students who are scheduled to sit exams during Ramadan.

Ramadan, 2017

Ramadan has a 33-year cycle and shifts backwards by approximately 11 days every year as determined by the lunar cycle. In 2017, Ramadan is predicted to start around 27 May and to end around 26 June (see Appendix 2 for details).

In 2017, Ramadan coincides with the UK exam season and the midsummer solstice and will have the second longest average fasting hours in the northern hemisphere during the 33-year cycle (2016 being the longest). Last year, 2016, was the first time Ramadan had clashed with exams in the UK since the 1980s, this is likely to continue until 2019/20.

Young Muslims and their families, particularly for those sitting exams this summer, will need to take into consideration the impact on their studies and the importance of examinations for their future, as well as any other relevant factors (such as health considerations), when deciding how they will observe Ramadan this year. There is no doubt that Ramadan falling during the exam season will put extra pressure on young Muslims, whatever decision they make, especially with the length of the fast over the next few years. They should be made aware that there is a wide and diverse range of opinions on how to observe Ramadan and from what age, which give the necessary allowances for them to perform to the best of their ability in exams.

Safeguarding issues

If there are concerns about an individual child, schools have an overriding safeguarding duty and should apply judgement and common sense on a case-by-case basis. Safeguarding and promoting the welfare of children is defined in the DfE's statutory guidance *Keeping Children Safe in Education*, as:

“... protecting children from maltreatment; preventing impairment of children's health or development; ensuring that children grow up in circumstances consistent with the provision of safe and effective care; and taking action to enable all children to have the best outcomes.”

If the school notices signs of dehydration or exhaustion then the child should be asked if they are fasting and advised to terminate the fast immediately by drinking some water. They can be reassured that in this situation, Islamic rulings allow them to break their fast and make it up later.

The imams, Islamic scholars, experts, chaplains and leaders we consulted said that while some children and young people want to fast, there are occasions when peers or others put pressure on them to do so. Further, some young people may feel guilty even though they feel that it is not in their best interests to fast, while others may want to fast because they do not want to miss out on the rewards of Ramadan.

Schools should be aware of these possibilities and apply judgement to determine where safeguarding or wellbeing issues arise.

External examinations 2017

In 2017, external exams will start, as usual, in early May and continue until the end of June.

The common timetabling of GCSE, GCE AS, and A level examinations is collectively coordinated by the awarding bodies through their representative body the Joint Council for Qualifications (JCQ). Each year the exam timetable is finalised a year ahead after consultation with schools and colleges, exam boards and other stakeholders². The summer 2017 timetable was finalised in May 2016 following such consultation.

The window in which GCSE and A level examinations are to be taken is at the same time in the academic calendar as it was in 2016. A range of issues are taken into account to ensure the timetable is fair to all pupils.

School and college leaders should look carefully at the advice and guidance about exam delivery from the individual exam boards and consider the suggestions raised in Section 5 of this paper to help ease the pressure on Muslim students who are fasting.

Examination boards have the discretion to consider each student's situation on an individual basis and may be able to give special consideration in some cases, such as illness.³

Diversity within Islamic law and ethics (Shari'ah)

The Islamic scholars we consulted made it clear that a key feature of Islam is the diversity of possible interpretations of Islamic law. Islam, like most major religions, has a pluralist tradition and is composed of a wide range of interpretations. This plurality is considered a strength and Muslim traditions evolve and can respond to new issues that emerge. Reasoning is encouraged and this has allowed different schools of Islamic law to flourish. Islam encourages all Muslims to engage in critical reasoning and to turn to local imams and scholars for further guidance.

Achieving what is good and protecting from what is harmful is an ultimate underpinning philosophy of Islamic law. While there are key principles on which most Muslims agree, such as the importance of fasting (*sawm*) and prayers (*Salah*), details vary from one school of law to another.

This means that when there are competing views, an individual is at liberty to decide what is best for themselves and their family.

² Ofqual Equality Impact analysis report 2013 also considered the potential impact on fasting students at GCSE; https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/529391/2013-11-01_01-equality-analysis-report-on-reforms-to-gcse-from.pdf and at A level; <http://webarchive.nationalarchives.gov.uk/20141031163546/http://ofqual.gov.uk/documents/equality-impact-assessment-on-the-a-level-decisions/>

³ See <http://www.jcq.org.uk/exams-office/access-arrangements-and-special-consideration/regulations-and-guidance> for more information

An example of diversity in interpretation can be found in the geographical distances that entitle the traveller to break their fast during Ramadan. Different Islamic schools base their interpretation on different evidence which may include words of the prophet Muhammad (*hadith*) or verses of the Qur'an (themselves open to interpretation as they may have more than one meaning in the Arabic language; meaning is also dependent on the context in which it is used). To decide which meaning is intended in the evidence, scholars use different methods to reach their own independent reasoning (*ijtihad*).

The importance of education in Islamic law

The pursuit of education is a religious and moral duty for all Muslim students of both genders. There are many references in the Qur'an and the *hadith* which urge believers to gain knowledge. For example, 'Seeking knowledge is compulsory for every Muslim, man and woman.' (*hadith*). A favourite supplication of the Prophet was, 'O Lord, increase me in knowledge.' (Qur'an 20:114)

Al-Bukhari attributes a tradition to the Prophet which says that the disappearance of knowledge and the absence of scholars from society would spell the demise of civilisation. For Muslims, the ultimate goal is to seek God through knowledge, including learning how to deal effectively and knowledgeably with this world. Muslim students, like all students, will want to do as well as they possibly can in their examinations.

Grades attained at GCSE and A level are critical to the further education and career prospects of young people. Due to the importance of these grades, young people sitting exams will need to seriously and thoughtfully take their future and their studies into account, alongside their previous experiences of Ramadan when deciding how they will observe Ramadan this year. Young people should be made aware that Islam does not require them to put their futures in jeopardy.

3 Devotion, fasting and health during Ramadan

Devotion and prayers

Sleep deprivation may be a concern for young people during Ramadan. Muslims are encouraged to recite as much of the Qur'an as possible, especially during Ramadan. Many Muslims listen to the entire Qur'an being recited over the nights of Ramadan in special prayers known as *tarawih* which are held in mosques and finish late at night. Many families invite family and friends to share the evening meal to break the fast (*iftar*). It is important for schools to be aware of this social aspect of Ramadan which may also lead to late nights for children.

The last third of Ramadan is considered to be an especially holy period because this is when the first verses of the Qur'an were revealed to the Prophet. Some Muslims like to observe *I'tikaf* in the mosque during the last ten nights of Ramadan. *I'tikaf* is similar to a retreat in the mosque where the person leaves behind all worldly matters and devotes all their time to praying, studying and engaging in worship. A special night, *Laylat al-Qadr* (Night of Power), is believed to fall on the 27th night of Ramadan. Many try to stay up all night in worship and prayer. It is also possible that this night could be on any of the odd nights of the month.

Students who have important exams should be advised not to spend all night praying to avoid tiredness. Students will not be able to perform the full *I'tikaf* due to attending school, but shorter *I'tikaf* is encouraged and may occur on a weekend so as not to interfere with school and exams.

Children and their parents or carers should be informed that extra devotions in Ramadan are voluntary; whereas for a child or young person to perform well in exams given their consequences, is obligatory.

Fasting and health

Length of fast

According to the Qur'an, traditional Islamic fasting timing is dawn to sunset, which averages out at just under 14 hours all over the earth as Ramadan cycles through the entire year in a 33-year cycle (although a few authorities allow sunrise to sunset, averaging 12 hours all over the earth). Most mosques in the UK begin fasting one to two hours before sunrise since dawn cannot be ascertained easily. Problems may arise when Ramadan falls in summer in high latitudes areas such as the UK (defined by Shaykh Mustafa al-Zarqa as over 45 degrees latitude⁵), because in summer, dawn to sunset fasting reaches 18-21 hours⁶. Islamic jurists differ on timing of fasting hours; the majority say dawn to sunset but there is a minority of jurists who limit the fasting timings to a maximum of 12-16 hours, wherever one is in the world.

Possible solutions: Fixed-length fasting

The Al-Mahdi Institute (Birmingham, UK) hosted a scholarly workshop in 2013 entitled The Practice of Fasting (Sawm) In the Modern World. Scholars at the workshop agreed that Muslims residing at high latitudes of the world should fast a 'normal' day's length. As for what constitutes a 'normal' day, the opinions of the scholars ranged from 14 hours to 16.5 hours.⁷

Following the timings of Mecca/Makkah and Medina/Madinah

A number of classical jurists have argued that in extreme latitudes, people could follow the approximate timings of Mecca/Makkah or Medina/Madinah, where the dawn-to-sunset fasting hours vary between 12 and 16 hours over the year. This ruling has been revived since the 20th century and endorsed by various jurists.

The imams, Islamic scholars, experts, chaplains and leaders we consulted were agreed that there is a pressing need for UK-based religious authorities to collectively discuss this issue and recommend solutions for Muslim communities. In the absence of such guidance, ASCL has consulted as far as possible, putting the welfare and education of UK schoolchildren first.

The NHS says: "Fasting during the month of Ramadan can be good for your health if it's done correctly... When the body is starved of food, it starts to burn fat so that it can make energy. This can lead to weight loss. However, if you fast for too long your body will eventually start breaking down muscle protein for energy, which is unhealthy."⁸

Muslim scholars agree that if there is danger to an individual's health, it is permitted for them to break their fast, and indeed they should do so immediately.

Schools and colleges also have a safeguarding responsibility to the children and young people in their care and will need to keep a close eye on students who may be fasting. If a student seems unwell or an adverse incident occurs, for example a student faints or collapses, the situation should be dealt with in the usual way through providing appropriate medical assistance, including the administering of medicines or giving water to drink.

5 Includes Northern Europe and most of Western Europe. Major exceptions; Spain, Southern France, Italy, Greece.

6 Note: "Dawn" and its astronomical reverse, "white twilight," are calculated variously using 12, 15 or 18 degrees of the sun's depression below the horizons. During the summer, and depending on the latitude (how northerly you are) in the UK, the distinction between "white twilight" and "dawn" disappears, so that even beginning the fast at 2am or 1am (midnight BST) is a matter of jurisprudential judgment (ijtihad).

7 For more information, see <http://almahdi.edu/the-practice-of-fasting-sawm-in-the-modern-world>

8 <http://www.nhs.uk/Livewell/Healthylamadan/Pages/fastingandhealth.aspx>

Few scientific studies have addressed the general health implications of fasting (positive or negative), especially long-period fasts, in any systematic way. Limited studies are indicative of possible negative health effects of long-period fasting, especially for certain groups of people, including students taking long exams.^{9 10}

The Department of Health has produced *Healthy Ramadan*, a guide to healthy fasting during Ramadan. The guidance warns about the need to drink enough water before fasting to avoid dehydration. Poor hydration can be made worse by weather conditions and everyday activities such as walking. It recommends a healthy diet from all food groups. The NHS guide says: “If you produce very little or no urine, feel disoriented and confused, or faint due to dehydration, you must stop fasting and have a drink of water or other fluid. Islam doesn’t require you to harm yourself in fulfilling the fast.”

4 Ramadan and performance

Fasting and staying up late for prayers may affect memory, focus, concentration and academic performance. There is a lot of clear research about the effects of hydration, dehydration and nutrition on performance but a paucity of research specific to students observing Ramadan. One Dutch study found that students fasting during Ramadan may be disadvantaged in their exam performance¹¹ while another study found that students reported reduced activity, study desire and concentration ability when observing Ramadan.¹²

Anecdotally, some Muslim pupils say that fasting enhances their performance, particularly if they have been used to it for some years. There is huge enthusiasm for fasting and some young people, who have made a positive decision to fast, say they feel energised during Ramadan.

Sleep deprivation should also be taken into account and may be the biggest factor affecting performance for young people who are both fasting and observing prayers at night.

‘Hardship’ exemptions

Students revising for and taking exams may be exempt from fasting according to some scholars. However, they are unanimous on the exemption for:

- those who are ill or on long term medication
- those who are travelling long distances
- girls who are on their period
- those with mental disabilities
- the old or weak
- breastfeeding or pregnant women

Illness and travelling (that cause hardship) are explicitly mentioned in the Qur’an (2:184) as reasons to break the fast and make it up later. Hardship is an established principle allowing people to defer or skip fasting. Specific examples of people who fall into this category have been widely discussed in the *tafsir* and *fiqh* literature (Qur’an-exegesis and jurisprudence).

10 See also Aadil (2004), Leiper and Molla (2003), Toda and Morimoto (2004) and Fazel (1998)

11 Ramadan, fasting and educational outcomes Hessel Oosterbeek Bas van der and Klaauw. This Dutch study indicated that Muslim university students in a non-Muslim environment are disadvantaged in a way they probably would not be in a Muslim environment where teaching and exam schedules are adjusted to the holy days of Islam. <http://www.tierweb.nl/assets/files/UvA/20110502-ramadan2011feb.pdf>

12 Daily practices, study performance and health during the Ramadan fast. Afifi 1997 This study explored the effect of Ramadan fasting on the daily life and performance of 265 university students and found over 50% of students observing Ramadan reported reduced activity, study desire and concentration ability. <http://www.ncbi.nlm.nih.gov/pubmed/9375486>

Verse 2:184 of the Qur'an says that those who are unable to fast can feed the poor instead. Muslims who cannot fast can use this exemption to still observe Ramadan in a legitimate way.

Do students taking GCSEs and A levels, fall into the category of 'hardship'?

Some Muslim jurists allow students who are experiencing hardship to break their fast during Ramadan (and make up the days later), if it affects their ability to revise and study for important exams. The imams, Islamic scholars, experts, chaplains and leaders we consulted thought that sitting important examinations can be an exemption from fasting if a student fears that fasting will affect his or her performance adversely.

Should schools ask children if they are fasting?

Positive dialogue and relationships between staff and students are key here and the answer to this question will depend on the individual circumstances for each child, particularly their age, understanding and any concerns there are about their health and wellbeing.

Primary schools: no child under the age of puberty is obliged or should be expected to fast. The imams, Islamic scholars, experts, chaplains and leaders we consulted felt, however, that many young children may want to do a partial fast. Fasting for primary age children is best done under parental supervision after school hours. Some UK schools have banned primary schoolchildren from fasting during the summer and this is legitimate. If primary children are fasting during school hours teachers and staff do need to know so that they can safeguard against any risk to health.

Secondary schools and colleges: A sensitive approach is required and schools should be cautious about asking students whether they are fasting or not. Asking children may be counterproductive and could be embarrassing for female students who may be on their period. Schools should, however, know which of their pupils are fasting and to avoid any embarrassment we recommend that schools ask parents and carers to let them know if their child is fasting. If a child presents with a health problem, it is appropriate to ask them if they are fasting.

5 Practical advice for schools during fasting

- Inform pupils of the allowances Islam gives for them to break the fast and make it up later if they feel fasting will in any way jeopardise their performance.
- Fasting pupils will not be in the canteen and will have plenty of spare time to pass during the lunch hour. It would be desirable to provide them with a supervised, quiet space to rest.
- Running revision lessons in cooler classrooms during hot weather will benefit all candidates.
- Discuss with students whether they would prefer revision lessons to be in the morning or afternoon.¹³
- Those on free school meals are still entitled to a meal. Schools should consider putting a bag together for students to take home.
- Any students not fasting for the reasons stated in Section 4, particularly girls on their period, should be provided with a space or area to eat where they feel comfortable.
- Fasting students are able to take part in physical activities but may need to reduce their level of activity. Schools may wish to plan alternative, less strenuous activities during PE or grant exemptions for some fasting pupils and should apply judgement and common sense on a case-by-case basis.
- Show sensitivity when arranging official celebrations for graduation or the end of exams.

¹³As with examinations it is not clear whether morning or afternoon revision lessons are preferable. A later start may be preferable as it allows pupils to sleep longer after late night prayers and the morning meal.

- School and college leaders will also want to consider the possible impact fasting and late night prayers during Ramadan may have on Muslim children when setting dates for other activities, such as sports days, trips and celebrations.

Exam rooms and halls

- Invigilators are advised to refrain from suggesting to students to have a ‘tiny sip of water’ for those fasting. This is not allowed unless there is concern that they may be suffering from dehydration.
- Good examination room management during hot weather will benefit all candidates; ensure that exam rooms are shaded, ensure fans and sufficient bottles of water are available. If possible, provide an outside shaded area and/or a cool, quiet room for students to use between exams.
- If a student taking an exam is showing any signs that they may be dehydrated, such as a headache or drowsiness, they should be advised to terminate the fast immediately by drinking some water. They can be reassured that in this situation Islamic rulings allow them to break and make it up later.
- Invigilators do need to keep a close eye on all students to help avoid any disruption to other students not involved in this activity.
- Provide a room(s), where appropriate, for prayers near exam locations.

7 List of endorsers

The imams, Islamic scholars, experts, Muslim chaplains in the education sector and leaders listed below agree that school and college leaders, teachers, Muslim children, young people and their parents or carers need the information contained in this information paper to enable them to make informed decisions about how to fulfil their Islamic obligations by observing Ramadan and doing as well as they possibly can in their public examinations.

It should be noted that there was diversity of opinion within the group, particularly in respect of the legitimacy of shorter fasting hours. Their endorsement here does not mean that they are aligned with every part of this paper.

8 Appendices

Appendix 1

Some relevant key Islamic principles

The primacy of mercy, compassion, justice, goodness and public welfare

“The Law is all about wisdom and achieving people’s welfare in this life and the afterlife. It is all about justice, mercy, wisdom, and good. Thus, any ruling that replaces justice with injustice, mercy with its opposite, common good with mischief, or wisdom with nonsense, is a ruling that does not belong to the Law, even if it is claimed to be so according to some interpretation.” Imam Ibn al-Qayyim of Damascus, 14th century CE, in *I'lam al-Muwaqqi'in*.

www.ascl.org.uk

The obligation of ease (*taysir*) in the presence of hardship (*mashaqqa*)

“God wishes ease for you, not hardship” (2:185), a Qur’anic verse in the context of concessions related to the Ramadan fast.

The prohibition of harm (*darar*), including anything that corrupts the health of people, mental or physical, and their financial, social and spiritual welfare

For example, the Al-Azhar Fatwa Council (2010) stated that fasting for more than 18 hours constitutes harm, and cannot be supported by Islamic law.

The ‘blocking of means’ (*sadd al-dharai*): taking steps to prevent harm, whether individual or social

The ‘opening of means’ (*fath al-dharai*): taking steps to facilitate goodness, whether individual or social

Promoting public welfare (*jalb al-masalih*) and preventing public harm (*dar’ al-mafasid*)

The assessment of harm and benefits according to their level: harms and benefits should be weighed against each other, these will always lie on a spectrum

15D refers to when the sun is 15 degrees below the horizon

NAUT refers to nautical twilight, which begins or ends when the sun is 12 degrees below the horizon

The astronomical definition of 'dawn' is disputed, with various Muslim religious authorities adopting one of the three possible definitions given above.

***** in the table** means that the timing is not available, because the sun does not reach that far below the horizon. This happens every year during the summer at high latitudes, such as the UK.

Notes:

- 1 If we use AST (Sun's depression = 18 degrees) as the start of dawn, this does not occur at all during Ramadan 2017 in any of the four capital cities. Therefore, the fasting start time and fasting length would be undefined.
- 2 If we use 15D (Sun's depression = 15 degrees) as the start of dawn, this does not occur at all during Ramadan 2017 in Edinburgh or Belfast. Therefore, the fasting start time and fasting length would be undefined in those cities. However, it does occur in London and Cardiff, giving fasting lengths of 19.5-20 hours during the month.
- 3 If we use NAUT (Sun's depression = 12 degrees) as the start of dawn, this results in fasting hours during Ramadan 2017 in London and Cardiff of 18-19 hours, and in Belfast of 19-20.5 hours. We only get defined fasting hours at the beginning of Ramadan for Edinburgh, of 19.5-20 hours.
